Chairperson's Report

Hello Members,

Hope you are all managing your lives reasonably well in lock-down mode. We have had some relief with the family and friend group size increasing from two to ten, but most of the other restrictions are still in place, which means we will not be having meetings or events for a while yet.

We are currently looking at booking Stephanie Johnson for a session on Astrocartography. This was initially scheduled for 15th March before being postponed due to COVID-19. We don't know the details of the platform to be used at present but it should be easy enough to use on your smart phones or computers.

Most countries are going through difficult times over the last couple of years, particularly with the recent stellium in Capricorn. Capricorn represents governments, corporations and structure and we are seeing a breakdown in the current system as dishonesty, greed and blatant over-consumption are being exposed and pressure is mounting from thousands of people sick and tired of turning a blind eye while our earth is being ransacked and people starve.

With the conjunction of Jupiter and Saturn in very early degrees of Aquarius on December 21st this year, we may hope to see some the beginnings of change for the better. These conjunctions occur every twenty years and this will be the first one in an air sign for approximately eight hundred years. Jupiter and Saturn surprisingly work well together. Saturn controls and balances the excesses and exuberance of Jupiter, and Jupiter prevents Saturn from being too restrictive and contracted. Aquarius as a sign represents freedom, equality and fairness. Humanitarian ideals, faith and an inclination towards tolerance may be on the cards. This is also a good placement for scientific breakthroughs and technology. Let's hope a vaccine for COVID-19 is discovered.

Best wishes,

Jeff Farrow

ONLINE EVENT

AANSW PRESENTS

Rozlyn Noble

Rock and Rolling with Progressions

Saturday 9th May

11:30am – 1:30pm AWST

Using Secondary Progressions in Predictive Astrology

The aspiring musician and his band were destined to become famous rock stars. The lead singer had a natal Sun at almost 12^o Virgo. Using the predictive technique of Secondary Progressions, it would indicate that a major event would occur at aged 18, when his progressed Sun changed signs into Libra. (12+18=30). Based on the day-for-a-year formula, this symbolic method of time is easy to understand and incredibly informative. The movements of the planets over the first 90 or so days after birth correlate to 90 years of life.

Who was this famous rock star? What happened when he was 18 years old? How did the progressions of the Sun, Moon and other planets indicate events in his life? Come along to the Sydney meeting and find out while gaining a thorough understanding of how to utilise the popular tool of Secondary progressions in your own astrology chart or that of friends and clients.

How have the progressed planets impacted your chart? When a progressed planet changes zodiac sign, changes direction of movement, forms relationships to other natal planets or emphasizes a degree of the zodiac then this will have meaning for the individual.

This presentation will focus mainly on the Progressed Moon, Progressed lunar cycles and the Progressed Sun. Through this you will gain an understanding of how the Moon and Sun can express their energies as they progress through different houses and signs. The information gained by looking at these planets can give you immense knowledge relating to themes and patterns occurring now and in the future. This can be a wonderful aid for the predictive astrologer.

Example charts will be shown to fully explain the process.
